

Technology Development Pathways: Case Studies from the National Nanotechnology Initiative

November 1, 2017

Overview

The Technology Development Pathways workshop will showcase application areas where nanotechnology has had commercial impact. Keynote presentations will highlight the pathways companies have taken to get from research to commercialization. Afternoon panel discussions will focus on specific steps of the development pathway, such as scale up and quality control/measurement systems. Building on these successes, conversations at the workshop will explore remaining technical challenges or innovations needed to fully exploit the commercial potential of nanotechnology over the coming decades. While the primary focus will be to share best practices from the private sector, Federal Government representatives will also participate, enabling attendees to learn of ongoing research, agency needs, and funding opportunities.

This event will support the goals of the [Sustainable Manufacturing: Creating Industries of the Future Nanotechnology Signature Initiative](#).
